

Flat Screen InvisiSound® Frame 3000

Introducing a Speaker System That Blends Into Your Home So Perfectly—It's Invisible!

A fully integrated left, center and right channel sound system hidden inside a flat screen TV frame.

For some, even the most stylish and good-looking sound systems don't blend enough into their home. Our solution: make the speakers *disappear*. All three front channel speakers—Left, Right, and Center—are hidden in the Frame. They sound amazing because they use the same technology found in our reference quality StreamLine Tower sound systems. And the look is simply gorgeous. Hardwood accent choices of piano black or light cherry wood finishes allow you more flexibility to change the look as desired.

Patented speaker technology brings it all to life.

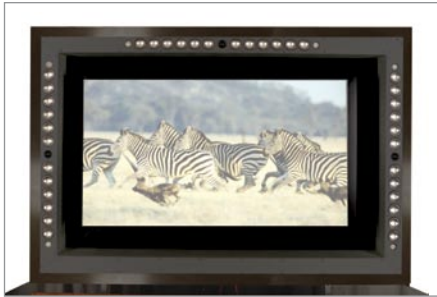

2" Centra Mid-Range drivers combined with silk dome tweeters reproduce clear, open audio for quiet, delicate passages, and powerful dynamic range for loud music and sound effects—all with pinpoint imaging and a wide soundstage.

Amazing home theater sound that hangs on your wall.

The InvisiSound Frame is easy to install with the included wall mount or directly to Centra A/V Consoles (Console mount sold separately). When combined with a Centra A/V Console, Centra M-Bass 1000 Subwoofers and Centra Surrounds, you'll be all set for 5.1 surround sound. Now you can enjoy exciting "custom-look" home theater without undertaking expensive custom installation.

Beautiful presentation. Seamless design.

Powerful performance. Centra by M·Design.

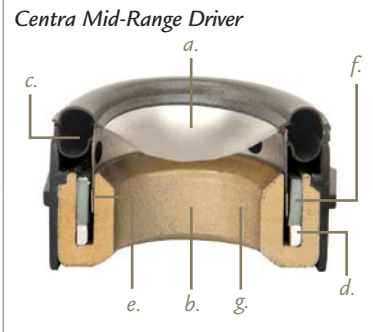

Removable grilles reveal 39 drivers in the three discrete line arrays for left, center and right channels. Shown with Piano Black trim.

Centra Flat Screen InvisiSound Frame 3000 provides left, center and right channel home theater audio.

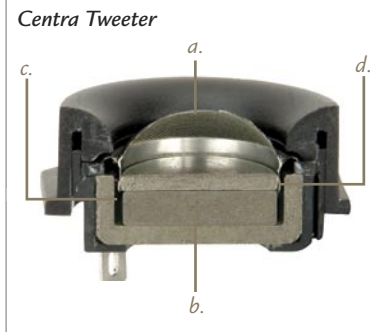

Frame shown mounted to Centra Audio/Video Console 800 and plasma TV (sold separately).

Patented Centra Speaker Technology

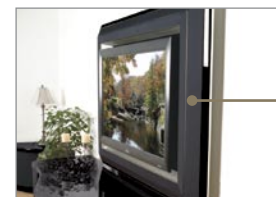

2-Inch Centra Mid-Range Driver:
